Energy saving using smart glazing systems: Description of thermal building performance simulation and analysis of the results Goran Šibenik

A lot of effort has been put into improving energy performance of buildings, and still a lot of problems are found with thermal performance of windows. Although its U values are constantly being improved, overheating problems can often occur in buildings with large areas of transparent surfaces. Besides the conventional shading products, some innovative solutions already exist on the market, but their efficiency and performance are still not examined thoroughly. Smart glazing, and especially electrochromic window devices, is one of the most promising products that are commercially available. Its implementation in simulation programs, as well as the results of the simulations, is tested and analyzed in this research. Simulation is performed by coupling lighting simulation program and energy simulation program through the third program – Building Control Virtual Test Bed. Cooling loads of a commercial building are calculated and the possibilities of energy saving by using electrochromic windows are found. Cooling loads are compared to conventional windows, where the effect of electrochromism is examined. Simulations have also been performed with windows with shades. The results demonstrate potential cooling loads reduction when smart glazing is used in oceanic climates.

From reader reviews:

Leigh Weimer:

Now a day people that Living in the era exactly where everything reachable by match the internet and the resources in it can be true or not call for people to be aware of each details they get. How many people to be smart in acquiring any information nowadays? Of course the answer is reading a book. Reading a book can help persons out of this uncertainty Information particularly this Energy saving using smart glazing systems: Description of thermal building performance simulation and analysis of the results book since this book offers you rich info and knowledge. Of course the knowledge in this book hundred percent guarantees there is no doubt in it you may already know.

Edward Stevenson:

Spent a free a chance to be fun activity to accomplish! A lot of people spent their down time with their family, or their friends. Usually they doing activity like watching television, gonna beach, or picnic inside the park. They actually doing same thing every week. Do you feel it? Do you wish to something different to fill your own free time/ holiday? Could be reading a book can be option to fill your cost-free time/ holiday. The first thing that you'll ask may be what kinds of reserve that you should read. If you want to try out look for book, may be the guide untitled Energy saving using smart glazing systems: Description of thermal building performance simulation and analysis of the results can be fine book to read. May be it is usually best activity to you.

Kimberly Moore:

It is possible to spend your free time to read this book this e-book. This Energy saving using smart glazing systems: Description of thermal building performance simulation and analysis of the results is simple to deliver you can read it in the park, in the beach, train along with soon. If you did not get much space to bring the printed book, you can buy often the e-book. It is make you easier to read it. You can save often the book in your smart phone. Therefore there are a lot of benefits that you will get when one buys this book.

Lamar Carr:

What is your hobby? Have you heard which question when you got pupils? We believe that that query was given by teacher on their students. Many kinds of hobby, Everybody has different hobby. And you know that little person like reading or as reading become their hobby. You should know that reading is very important and also book as to be the thing. Book is important thing to provide you knowledge, except your personal teacher or lecturer. You get good news or update regarding something by book. Different categories of books that can you take to be your object. One of them is actually Energy saving using smart glazing systems: Description of thermal building performance simulation and analysis of the results.
