Manufacturing of Natural Fibre Reinforced Polymer Composites

Manufacturing of Natural Fibre Reinforced Polymer Composites

Natural fibre composite is an emerging material that has great potential to be used in engineering application. Oil palm, sugar palm, bagasse, coir, banana stem, hemp, jute, sisal, kenaf, roselle, rice husk, betul nut husk and cocoa pod are among the natural fibres reported to be used as reinforcing materials in polymer composites. Natural fibre composites were used in many industries such as automotive, building, furniture, marine and aerospace industries. The advantages of natural fibre composites include low cost, renewable, abundance, light weight, less abrasive and they are suitable to be used in semi or non-structural engineering components. Research on various aspects of natural fibre composites such as characterization, determination of properties and design have been extensively carried out. However, publications that reported on research of manufacture of natural fibre composites are very limited. Specifically, although manufacturing methods of components from natural fibre composites are similar to those of components from conventional fibre composites such as glass, carbon and Kevlar fibres, modification of equipment used for conventional fibre composites may be required. This book fills the gap of knowledge in the field of natural fibre composites for the research community. Among the methods reported that are being used to produce components from natural fibre composites include hand lay-up, compression moulding, filament winding, injection moulding, resin transfer moulding, pultrusion and vacuum bag moulding. This book is also intended to address some research on secondary processing such as machining and laser welding of natural fibre composites. It is hoped that publication of this book will provide the readers new knowledge and understanding on the manufacture of natural fibre composites.

From reader reviews:

Dennis Byrd:

In this 21st centuries, people become competitive in every single way. By being competitive at this point, people have do something to make these individuals survives, being in the middle of often the crowded place and notice by simply surrounding. One thing that often many people have underestimated the item for a while is reading. That's why, by reading a reserve your ability to survive enhance then having chance to stand than other is high. For yourself who want to start reading some sort of book, we give you this Manufacturing of Natural Fibre Reinforced Polymer Composites book as beginner and daily reading reserve. Why, because this book is greater than just a book.

Edwin Dulac:

Reading a guide tends to be new life style with this era globalization. With examining you can get a lot of information that may give you benefit in your life. Having book everyone in this world may share their idea. Ebooks can also inspire a lot of people. A lot of author can inspire their particular reader with their story or maybe their experience. Not only situation that share in the books. But also they write about advantage about something that you need example. How to get the good score toefl, or how to teach your sons or daughters, there are many kinds of book that exist now. The authors in this world always try to improve their talent in writing, they also doing some investigation before they write on their book. One of them is this Manufacturing of Natural Fibre Reinforced Polymer Composites.

Peter Beaton:

Playing with family within a park, coming to see the water world or hanging out with friends is thing that usually you could have done when you have spare time, in that case why you don't try thing that really opposite from that. I activity that make you not feeling tired but still relaxing, trilling like on roller coaster you have been ride on and with addition of information. Even you love Manufacturing of Natural Fibre Reinforced Polymer Composites, you can enjoy both. It is good combination right, you still desire to miss it? What kind of hang-out type is it? Oh seriously its mind hangout men. What? Still don't understand it, oh come on its known as reading friends.

Julie Gibson:

Is it you actually who having spare time after that spend it whole day by means of watching television programs or just lying down on the bed? Do you need something new? This Manufacturing of Natural Fibre Reinforced Polymer Composites can be the response, oh how comes? It's a book you know. You are so out of date, spending your spare time by reading in this brand-new era is common not a nerd activity. So what these textbooks have than the others?
